

Flood Show Report

Up 20.08

New complicated boat pre show went fine. Will use in October.

Wind reduced the impact of the powershield in the opening scenes. Projector focus was adjusted to compensate and the final scenes were much more successful.

The lock switch on the electric motor on the narwhal boat slipped. This led to a delay in the final scene which was resolved by show runner talking cast through a reset.

A number of microphone incidents (primarily around Mr Khan's mic) meant that a number of scenes were restaged in the moment to compensate. The wind restrictor had got soaked with rain.

Down 21.26
